## **DETAILED ACTION**

## Election/ Restriction

Claims 1-24 are pending in this application.

- 1. Restriction to one of the following inventions is required under 35 U.S.C. 121:
  - I. Claims 1-16, drawn to a organic layer and a method for making it classified in class 257, subclass 040 and class 438, subclass 82.
  - II. Claims 17-24, drawn to a organic transistor, classified in class 257, subclass E51.005.
- 2. in the case applicant elected group I, these inventions are required to be further restricted under 35 U.S.C. 121:as the following:
  - Group A. Claims 11-16, drawn to a organic layer classified in class 257, subclass 040.
  - Group B. Claims 1-10, drawn to a method for making circuitized substrate classified in class 438, subclass 687.
- 3. The inventions are distinct, each from the other because of the following reasons:

Art Unit: 2818

Inventions II and I are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because the transistor can be patentable with a novel gate structure. The subcombination has separate utility such as: the claimed organic substrate can be used in other applications such as non-electronic organic material.

4. for the method and device restriction, the inventions are distinct, each from the other because of the following reasons: Inventions group B and group A are related as process of making and product made. The inventions are distinct if either or both of the following can be shown: (1) that the process as claimed can be used to make other and materially different product or (2) that the product as claimed can be made by another and materially different process (MPEP § 806.05(f)). In the instant case unpatentability of the Group A invention would not necessarily imply unpatentability of the Group B invention, since the device of the group A invention could be made by processes materially different from those of the Group B invention. For example, in claim 1, the process for making a device of claim 11 wherein this process can be used to make an non-organic electronics device, which is materially different device from claim 11.

5. Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, the fields of search are not coexistent. Therefore, separate examinations would be required and restriction for examination purposes as indicated is proper.

6. Applicant is advised that the response to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

## CONCLUSION

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Thinh T Nguyen whose telephone number is 571-272-1790. The examiner can normally be reached on 9.00 AM 6.00 PM Monday through Friday.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, DAVID NELMS can be reached on (571) 272-1787. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 872-9306 for regular communications and (703) 872-9319 for After Final communications.
